IN THE SPECIFICATION:

Please REPLACE the paragraph that begins at page 8, line 2 with the following:

The image processor 33 conducts processing of the image stored in the image memory according to a command from the processor 31 to recognize the object. The image processing device 30 is similar in configuration and function to an image processing device in the prior art. However, according to the present invention, the image processing device 30 is characterized in that teaching models (described later) are stored in the non-volatile memory 37, and pattern matching is carried out by using the stored teaching models, for the image data of the pile of workpieces photographed by the image pickup device 20 to obtain three-dimensional position and posture of the workpiece.
